Served stats

Throughput, latency and quality of each served recipe, by model and hardware

2026-10-16 21:15 UTC

Rendered 2026-10-16 21:15 UTC from stats/*.json, the ledger every harness run and harness export adds to (python3 -m harness stats renders it again). Aggregate tok/s, greedy, 256-token replies, the recipe's own ruler; engine rounds from the server's own counters.

Overview: by model and hardware

Aggregate tok/s as prose/code/structured/list; first token in seconds (one stream / the most streams).

model	hardware	one stream	most streams: total	first token (s)	suite	measured

Served earlier, numbers in their READMEs only

These recipes predate the ruler's JSON, so their measurements are not in the ledger; their READMEs hold them.

model	hardware	engine	recipe
Qwen3.8-Flash-Next, turboderp EXL3 4.05 bpw	2x NVIDIA DGX Spark (GB10), TP=2	TensorFold 0.6.6 (Python) with an EXL3 patch	github.com/BobClawblaw/qwen38-flashnext-exl3-2x-dgx-sparks
Qwen3.8-Flash-Next (TensorFold 0.6.6 recipe)	2x NVIDIA DGX Spark (GB10), TP=2	TensorFold 0.6.6 (Python)	github.com/BobClawblaw/qwen38-flashnext-tensorfold-2x-dgx-sparks

Step-5-Preview on one M5 Ultra, final build: measured outside the harness

TensorFold native Metal, branch step5-native at engine 6e791da6: 2,048-row prompt chunks, the prompt cache and the idle keepalive's kernel tick. Greedy unless said; served with --parallel 2 --vision at the default context (227,025).

what	measured
prompt, 4k / 8k / 16k / 32k tokens	868 / 863 / 840 / 800 tok/s (a 4k prompt right after a pause was 580 before the keepalive fix)
212k-token chat question, one record's code of 10,500	2 of 3 right (records 3,000 and 9,800; missed 777), 376 s each, at least 19% of memory free
129k-token chat question	2 of 2 right (records 777 and 5,000), about 200 s each
MTP drafts against "draft": false, 200-400-token replies timed with their prompt	identical; code 25.8 to 41.2 tok/s, prose 27.0 to 36.6, math 26.9 to 48.8
prompt cache, an 11.6k-token chat sent again, then two more turns	15.3 s fresh, 1.8 s again, turns resumed at 11,601; replies identical to --prompt-cache-gib 0
prompt cache, images (1200 x 800 PNG, 688 tokens)	resent in 2.15 s instead of 3.8 s; replies identical to the cache off
a kept state that cannot sit beside its stream (2.4 GiB cache budget)	dropped before the pass; the prompt read again with the same reply
a 1-token reply after 2 / 6 / 30 / 120 s idle	0.17 / 0.18 / 0.18 / 0.19 s (about 3 s before the kernel tick and residency set)
two 18k/31k-token chats at once	both right

Step-5-Preview on one M5 Ultra, first build (512-row chunks): measured outside the harness

TensorFold native Metal, branch step5-native (engine 5ad7660c, images aa221b11), MLX 2-bit experts with the rest 8-bit, greedy, one stream. The harness's step5-m5 runs hold the ruler and the suite; these are the rest.

what	measured
prompt, 4k / 8k / 16k / 32k tokens	690 / 668 / 647 / 622 tok/s (the sparse indexer caps each row's keys past 4k)
131,016-token chat question about its first page	answered exactly, 264 s end to end, at least 23% of memory free
decode without drafts, 20 / 600 / 4,200 / 32,768 tokens of context	29.6 / 21.9 / 14.7 / 14.5 tok/s
MTP drafts against "draft": false (replies token-identical)	code 25.7 to 44.6 tok/s (70% accepted), prose 26.4 to 34.8 (56%), math 26.2 to 46.0 (75%)
an image, 1200 x 800 PNG (six 504-px crops and the overview, 692 prompt tokens)	2.1 s to a 4-token answer
an image, 600 x 400 PNG (overview only, 193 prompt tokens)	0.7 s
